

WINTER – 12 EXAMINATION

Subject Code : 12043

Model Answer

Page No : ____/ N

Q. No. 1

(a) Creep:- Continuous deformation of the material which undergoes with time due to application of external steady load is called as creep.

Example : concrete beam gets permanently deflected after some years due to continuous loading.(01 mark for definition & 01 mark for example.)

(b) Double Shear :-When shear force coming on the section is resisted by two shearing planes then it is said that the member is subjected to double shear. (02 marks).

(c) Types of beams

½ mark for each type of beam + ½ mark for fig.

(d) Hooks Law :Within elastic limit stress is directly proportional to the strain.02 marks

(e) Parallel axis theorems : If I_G be the M.I. of a lamina about its own centroidal axis then the M.I. of the lamina about an axis AB parallel to centroidal axis is given by

$$I_{AB} = I_G + Ah^2 \quad \text{Where}$$

A = Area of lamina

h = Dist. Between axis centroidal axis and axis AB

I_{AB} = M.I. of Lamina @ axis AB

I_G = M.I. of lamina @ centroidal axis

(01 mark for statement & 01 mark for formule)

$$(f) I_P = \frac{\pi}{32} (d)^4 \quad -01$$

$$= \frac{\pi}{32} (50)^4 = 613592.32 \text{ mm}^4 \quad -01$$

WINTER – 12 EXAMINATION

Subject Code : 12043

Model Answer

Page No : ____/ N

- (g) (i) The material of the beam is homogenous and isotropic.
- (ii) The material obeys Hook's Law.
- (iii) The transverse section of the beam which is plane before bending remain plane after bending.
- (iv) Young's Modulus of beam material will be same in tension and compression.
- (v) Each layer is free to expand or contract independently w.r.t. a layer above or below it.
- (vi) The beam is initially straight & of uniform c/s section.
- (vii) The radius of curvature after bending is large as compared to the dimensions of the cross section.

(One mark each for any two assumptions)

(h) Uniformly Distributed Load (UDL)

The load which is acting with uniform intensity over length of beam then such load is called as uniformly distributed load . - 02 marks

(i) Eccentric load :

The load which is acting at some distance away from the centroidal axis (i.e. eccentricity) is called as eccentric load. - 02 marks

(j) $e \leq \frac{Z}{A}$

$Z = \frac{\pi}{32} d^3$ $A = \frac{\pi}{4} d^2$ - ½ mark

$e \leq \frac{\pi}{32} d^3 \cdot \frac{4}{\pi d^2}$ - ½ mark

$e \leq d/8$ -01 mark

WINTER – 12 EXAMINATION

Subject Code : 12043

Model Answer

Page No : ____/ N

$$(k) \quad T = \frac{\sigma_s}{R} I_P = \frac{\sigma_s}{R} \cdot \frac{\pi}{32} [(d_o)^4 - (d_i)^4] \quad - 02$$

OR

$$T = \frac{G\theta}{l} I_P = \frac{G\theta}{l} \cdot \frac{\pi}{32} [(d_o)^4 - (d_i)^4] \quad 02 \text{ mark}$$

$$(l) \quad P = \frac{2\pi N T_{av}}{60} \text{ Watts.} \quad \text{OR} \quad P = \frac{2\pi N T_{av}}{4500} \text{ H.P.} \quad (01 \text{ mark})$$

P = Power, N = Speed of shaft in RPM T_{av} = Mean or average. Torque.(01 mark)

Q.2

a) (i) Young's Modulus : Within the elastic limit the ratio of stress and strain is constant and this constant is called as young's modulus and it is denoted by E. – 01

$$E = \frac{\text{Stress}}{\text{Strain}} \quad E = \frac{\sigma}{\epsilon} \quad - 01 \text{ mark}$$

(ii) Modulus of Rigidity : Ratio of shear stress to the shear strain is called as modulus of rigidity. Generally denoted by C, G. or N. – 01

$$\text{Mod. Of Rigidity.} = \frac{\text{Shear Stress}}{\text{Shear Strain}} \quad C = G = N = \frac{\tau}{\phi} \quad -01 \text{ mark}$$

b)

A= Limit of proportionality , B = Yield point

C= Lower yield point E= Ultimate Load, F = Failure load

WINTER – 12 EXAMINATION

Subject Code : 12043

Model Answer

Page No : ____/ N

Ultimate stress : The maximum stress induced in a member before failure is called as ultimate stress.

(02 mark for diagram & 02 mark for definition)

c) $d = 28\text{mm}$ $l = 700\text{ mm}$ $P = 52 \times 10^3\text{ N}$
 $A = \pi/4 (28)^2 = 615.75\text{ mm}^2$, $E = 2004\text{ N/m}^2 = 2004 \times 10^{-6}\text{ N/mm}^2$.
 δl .due to fore $\delta l_1 = \frac{Pl}{AE}$, $\delta l_1 = \frac{52 \times 10^3 \times 700}{615.75 \times 2004 \times 10^{-6}} = 29498.45\text{mm}$ $1\frac{1}{2}$
 δl due to lateral pressure = δl_2 $36\text{ MPa} = 36\text{ N/mm}^2$.
 $\delta l_2 = \frac{pr}{E} \times \mu \times l = \frac{36}{2004 \times 10^{-6}} \times 0.28 \times 700 = 3520.96\text{ mm}$ $1\frac{1}{2}$
Total Change in length $\delta l = \delta l_1 + \delta l_2$
 $= 29,498.45 + 3520.96$
 $= 33019.41\text{ mm}$ 01

- If we consider $E = 200\text{ Mpa}$ instead of 2004 Pa
 $E = 200 \times 10^6\text{ N/m}^2 = 200\text{ N/mm}^2$.

$\delta l_1 = \frac{52 \times 10^3 \times 700}{615.75 \times 200} = 295.58\text{mm}$ $\frac{1}{2} + 1$
 $\delta l_2 = \frac{36}{200} \times 0.28 \times 700 = 35.28\text{mm}$ $\frac{1}{2} + 1$
 $\delta l = \delta l_1 + \delta l_2 = 295.58 + 35.28 = 330.86\text{ mm}$. 1

- if we consider $E = 200\text{ GPa}$ instead of 2004 Pa ,
 $E = 200 \times 10^9\text{ N/m}^2 = 2 \times 10^5\text{ N/mm}^2$.

$\delta l_1 = \frac{52 \times 10^3 \times 700}{615.75 \times 2 \times 10^5} = 0.2955 = 0.30\text{mm}$ $\frac{1}{2} + 1$
 $\delta l_2 = \frac{36}{2 \times 10^5} \times 0.28 \times 700 = 0.0353\text{mm}$ $\frac{1}{2} + 1$
 $\delta l = 0.30 + 0.035 = 0.335\text{ mm}$. 1

(d) $E = 3k(1-2\mu)$ $2\frac{1}{2}$
 $E =$ Modulus of elasticity $\frac{1}{2}$
 $K =$ Bulk Modulus $\frac{1}{2}$
 $\mu =$ Poisson's ratio $\frac{1}{2}$

WINTER – 12 EXAMINATION

Subject Code : 12043

Model Answer

Page No : ____/N

(e) $E = 204 \text{ GPa}$

$$= 204 \times 10^3 \text{ N/mm}^2.$$

$$\mu = 0.27$$

$$e_x = \frac{6x}{E} - \mu \cdot \frac{6y}{E}$$

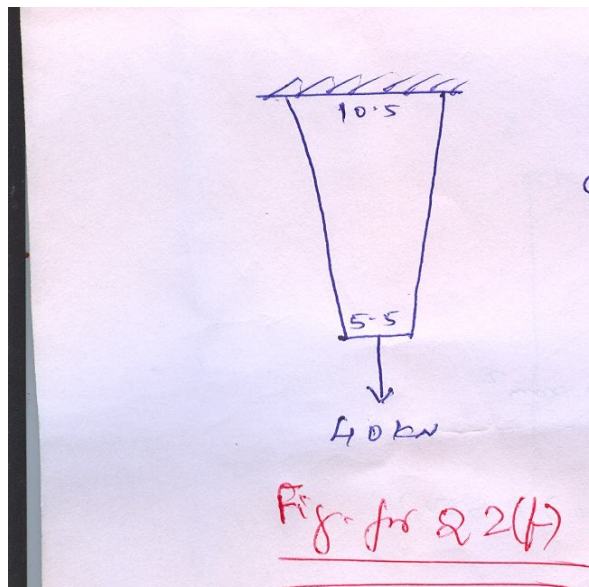

$$= \frac{1}{E} (6x - \mu 6y)$$

$$= \frac{1}{204 \times 10^3} [140 - 0.27(140)] = 5.01 \times 10^{-4} \quad 02 \text{ marks}$$

$$K = E/3(1-2\mu)$$

$$= \frac{204 \times 10^3}{3(1-2 \times 0.27)} = 147826 \text{ N/mm}^2 \quad 02 \text{ marks}$$

f)

$D = 105 \text{ mm}$ $d = 55 \text{ mm}$, $l = 2000 \text{ mm}$.

$$P = 40 \times 10^3 \text{ N} \quad E = 2 \times 10^8 \text{ kN/m}^2$$
$$= 2 \times 10^8 \times 10^3 \times 10^{-6} = 2 \times 10^5 \text{ N/mm}^2.$$

$$\delta l = \frac{4PL}{\pi E D d}$$

02

WINTER – 12 EXAMINATION

Subject Code : 12043

Model Answer

$$= 1963495.41 \text{ N.mm.}$$

$$= 1963.495 \text{ N.m.} \quad 01 \text{ marks}$$

$$\text{Power transmitted, } P = \frac{2\pi NT}{60} = \frac{2\pi \times 120 \times 1963.495}{60}$$

$$\approx 24674 \text{ W}$$

$$\approx 24.674 \text{ KW} \quad 1+1 \text{ marks}$$

Q.6 (e)

$$P = 375 \text{ kW, } N = 210 \text{ rpm } \tau_{\max} = 50 \text{ Mpa}$$

$$\theta = 1^\circ \approx \frac{\pi}{180} \text{ radians } l_1 = 3000 \text{ mm, } I_p = \frac{\pi d^4}{32} = \frac{\pi \times d^4}{32} = 0.098175 d^4 \text{ mm}^4 \quad \frac{1}{2} + \frac{1}{2}$$

$$G = 80 \text{ Gpa} \approx 80000 \text{ Mpa}$$

$$\text{Using } P = \frac{2\pi NT}{60} \quad 01 \text{ marks}$$

$$375 \times 10^3 = \frac{2\pi \times 210 \times T}{60}$$

$$\therefore T = 17052.31 \text{ N.m.} \quad 01 \text{ marks}$$

$$\text{Using } \frac{T}{I_p} = \frac{\tau}{r} = \frac{G\theta}{l} \quad 01 \text{ marks}$$

$$\frac{17052.31 \times 10^3}{0.098175 d^4} = \frac{50}{\left(\frac{d}{2}\right)} = \frac{80000 \times \pi / 180}{3000}$$

$$d^3 = 1736947$$

$$d = 120.206 \text{ mm}$$

$$d = 214.85 \text{ mm}$$

$$\therefore \text{Provide } d = 214.55 \text{ mm} \quad 01 \text{ marks}$$

WINTER – 12 EXAMINATION

Subject Code : 12043

Model Answer

Page No : ____/ N

Q. 6 (f)

$$D = 120 \text{ mm}, \quad d = 90 \text{ mm}, \quad r = 60 \text{ mm}$$

$$T = 18 \text{ kNm}$$

$$= 18 \times 10^6 \text{ N mm}$$

$$\text{Polar M.I.} = I_p = \frac{\pi}{32} (120^4 - 90^4) \quad 1 + 1 \text{ marks}$$

$$= 13916273.71 \text{ mm}^4$$

$$\text{Using } \frac{T}{I_p} = \frac{\tau}{r}$$

$$\frac{18 \times 10^6}{13916273.71} = \frac{\tau}{60}$$

$$\tau = 77.61 \text{ N/mm}^2.$$
